

Optimizing Warehouse Processes with User-Friendly Mobile Solutions

Leading provider of cloud-based enterprise software solutions, 2BM SOFTWARE A/S is an SAP platinum partner and a member of UNITED VARs, the world's largest federation of resellers. Based on SAP® Business Technology Platform, the company's mobile apps enable user-friendly, fast mobile and offline handling of business processes.

SAP customers found that key warehouse activities such as receiving goods or organizing shipments could be time-consuming and costly due to employees having to log in to a computer or use paper forms. To address this, 2BM SOFTWARE developed a mobile app that allows workers to easily and quickly scan items and interact with SAP-based inventory and warehouse management processes, **streamlining workflows and increasing productivity.**

Pallets moved each day,
with a team of 40 workers

Real-time

Updates on the completion
of goods movements

Mobilizing Inventory Management with 2BM Mobile Warehouse

Context: Eliminating Time-Consuming, Paper-Based Activities and Enhancing the User Experience

- Reliance on cumbersome, paper-based workflows
- Requirement for warehouse staff to log on to a computer to find out information or pick up tasks
- Lack of synchronization between ERP-based inventory calculations and warehouse stock counts

How: Providing Warehouse Workers with Mobile Access to Task Information

- SAP-certified mobile app built on SAP Business Technology Platform (SAP BTP), using SAPUI5 and the SAP Fiori user experience (UX)
- Modern and user-friendly UI based on the SAP Fiori UX
- Intelligent barcode scanning and photo documentation
- Compatibility with modern mobile devices, regardless of operating system
- Tight integration with the SAP ERP application, SAP S/4HANA®, and the SAP Extended Warehouse Management application
- Offline capabilities, allowing users to continue working even in areas with no network coverage

The Results: Improving Productivity by Accelerating Inventory Management Processes

- Faster goods and shipment handling, improving warehouse throughput
- Increased data quality as a result of the elimination of paper forms
- Ability to update SAP solutions on goods shipments and stock counts in real time
- Option to continue working with inventory management processes even when the solution is offline
- Future-ready solution based on open SAP technology, enabling the extension of functionality to meet evolving business needs

“2BM Mobile Warehouse helps our customers digitalize warehouse processes and integrate them with their existing warehouse and inventory management software from SAP. This way, they can **speed up workflows, boost warehouse performance, and secure supply chain uptime.**”

Martin Pock, CEO, 2BM SOFTWARE A/S
