

INTEGRATED SOLUTIONS FOR YOUR ENGINEERING PROCESS

CIDEON advises and supports companies in implementing innovations and optimising engineering processes. As solution partner of United VARs, Cideon has strengthened the United VARs solution portfolio with the corresponding SAP PLM know-how.

CUSTOMER NEEDS

All Cideon customers have a common focus: engineering. Their tasks are on the one hand in the development and production of customer-specific machines and systems or on the other hand in innovative products. Each customer faces a whole range of challenges in order to remain competitive. This always emerges as part of our projects.

Starting with the challenge of developing more and more complex products. For example, networking with other systems or using completely new production technologies and new materials.

This requires a high degree of innovation, which must take place despite growing cost pressure, ever-shorter development cycles and a growing shortage of skilled workers. In addition, the globalization of markets means that producers must increasingly comply with country-specific regulations or laws. Means: Products often have to be adapted country-specifically, which in turn requires additional effort when creating the documentation.

CUSTOMER CHALLENGES

To meet these challenges, our clients deal with topics such as standardization and automation.

In detail, we then speak of keywords such as PLM, PDM, CAD, data security, lean manufacturing or ERP integration. The optimization of the PDM/PLM and ERP processes, for example, has the goal of avoiding errors with continuous data and information flow and distributing information transparently.

The aim of the standardization requires both a corresponding methodology in CAD and a corresponding data management. The automation of PDM/ERP processes, such as the change and release or article and BOM process as well as the automated generation of neutral formats also contains great potential.

These solutions can all be summarized under the term digitization and here is the expertise of Cideon.

SOLUTIONS CIDEON

CIDEON - efficient engineering is the claim under which we summarize all our activities.

By this, we mean the optimal interaction between the company processes, the software systems used and the employees who work with them. Efficient engineering means for CIDEON to implement powerful software systems and to adapt them optimally to the company processes. Both the system landscape and the company processes are subject to constant change and the employees are facing a great challenge. In order for employees to accept the processes and systems, they must be well trained on the systems, and the systems must properly map the processes.

Both are mandatory for efficient engineering.

Another key component in engineering is the management of all product data. Suitable filing structures improve search and research options and consistent change processes as well as automatically generated neutral formats safeguard your processes. The creation of articles and parts lists and the connection to your ERP system creates a consistency in the logistical processes.

With SAP Direct Integration, we offer our customers a highly efficient and secure interface-free integration of their CAD systems into SAP. The integration developed by Cideon and distributed by SAP enables data and document management in the familiar SAP environment as well as the possibility of output management and integrated articles and BOM processes.

CIDEON BENEFITS

Individual, professional and security

Customers with individual requirements particularly value our expert know-how in the specialist areas and the flexible implementation of their individual wishes.

Agile project approaches

Whether classic waterfall or agile - our goal is to work together with you to make projects manageable and successfully implemented.

Project security

Due to our large, nationwide consulting team, we give you the important project security that there are no delays.

Internationality

We also realize cross-location and international projects with our large and experienced consulting team.

Managed Services

In order to be able to ensure optimal customer care even after the project, we offer scalable services from support to outsource full-service. In doing so, we attach great importance to early involvement of service employees to ensure a smooth transition from the implementation project to ongoing operations.

ABOUT US

Cideon

CIDEON provides advice and support to businesses on implementing innovation and optimising engineering processes to raise performance, customer benefits and business value. They focus on the various sections within design as well as the administration and maintenance of product data through to the integration in inventory control systems.

CIDEON is Autodesk Platinum Partner in the German speaking region, partner to PROCAD, a Platinum Build Partner to SAP SE and software partner to Dassault Systèmes. It employs around 300 personnel at 15 locations in the DACH region. CIDEON - efficient engineering.

United VARs

United VARs is the world's largest alliance of 50+ SAP solution providers based in more than 90 countries. United VARs member companies are focused on the mid-market, are leaders within their sector and have been recognized with the SAP Platinum Partner status; which assures first-class service. For customers with global SAP implementation requirements, United VARs guarantees the best service and support for its customers' international roll-out projects, ERP optimization projects and cross-border nearshoring.
